RUAVIEW SIMMENTAL AND ANGUS ANNUAL BULL SALE

Thursday 20th May 2021

**Online live streamed thru bidr.co.nz
and on Farm: 801 Raetihi Road,
Ohakune.
12 Noon Start**

Comprising:

19 x 20 month Angus Bulls

12 x 20 month Simmental Bulls

Rebate of 5% to non-participating companies upon registration

Introduction 2021

Welcome to our annual bull sale. We will be holding our sale under the usual auction system, but with the continued uncertainty of Covid 19 we will also be using the ONLINE BIDR auction, live streaming the sale also. This will give prospective buyers and views the option of viewing the sale and also the opportunity to buy online. It is also in place should we have to return to lockdown levels, due to Covid You will find instructions towards the back of the catalogue about how to register through the BIDR system, as you need to be registered as a buyer a few days before our sale day. On sale day you will need to log into BIDR with your user name and password and register for our Ruaview Simmental and Angus auction.

We have tried to describe the bulls as accurately as we can, by printing as much information as possible, including raw data, EBV's and Beefclass, in the catalogue lots. BeefClass is the only structural classification in the beef industry. If you don't measure, how do you know that you are improving?

It is certainly pleasing that the meat schedule is holding up well, with all the shipping problems, but with the massive shortage of protein worldwide, I can't see things changing.

The values of selecting bulls to produce faster returns, through better carcass qualities, is so important, and the use of cross breeding over your lesser types of cows can certainly lift the value of their offspring. "Keep lifting the bar to reap the rewards"

Our Simmental offering have again performed superbly well, especially the bulls sired by the new polled bull LRX HP Rocket 23Y, who are looking very promising. We also have 2 bulls by Glen Anthony Executive AE11,(Who is a LRX HP Rocket 23Y son), producing cattle with outstanding muscling and docility.

The Angus new sire Karoo Knockout K176 is really exciting. His sons in the sale are all displaying tremendous carcass qualities, while maintaining a very clean shoulder. The early development of his sons is impressive, and the docility outstanding.

Our breeding objectives are always based on Production and Reproduction, along with Geneotype and Phenotype, as one is of no use without the other.

We continue to be an AngusPure partner, which gives you added options for the sale of your Angus progeny. We hope you take advantage of this initiative. You do need to have AngusPure tags in your stock to qualify for this programme. Please contact Kim Lowe if you need clarification of the tags on kim@anguspure.co.nz or phone 0275504018.

BeefClass scores were by assessor - 5021, John, and EBV's published are as at March 2021

Scrotal measurements are as at 29/03/2021.

If you wish to view the bulls at any stage, to assist you in your breeding goals, please don't hesitate to contact us to arrange a convenient time, as it would be a pleasure to discuss your requirements. Phone 06 3858040 or 027 4314992

We wish you and your family safe health, and hope you can participate in the online auction.

Thank you
John & Helen

CONDITIONS OF SALE

The Sale will be conducted under the conditions set down by the New Zealand Stock and Station Agents Association, as posted at the sale. Every Lot shall be at the risk of the purchaser at the fall of the hammer.

GUARANTEE

RUAVIEW bulls are guaranteed for 2 years from the date of the sale against structural soundness, infertility or incapability of service. Under these circumstances, we will

-Replace the bull with a satisfactory substitute if available, or

-Issue a credit equal to the purchase price less the salvage value. This credit may be used at future RUAVIEW bull sales, or we will refund your credit.

This guarantee covers the purchase value of the bull without interest, costs or damages. The guarantee shall apply providing the bull's incapacity is not caused by injury or disease contracted since leaving the RUAVIEW property, that is calculated on the basis that the guarantee is reduced by one third of the purchase price for each year of standard service from the sale date. A veterinary certificate must be supplied by the purchaser upon request.

If any bull that is purchased does not possess a reasonable fertility, although not totally infertile, any dispute that may arise shall be settled by an arbitrator appointed by the auctioneers and must be lodged within 12 calendar months from date of sale.

HEALTH

RUAVIEW bulls are examined by a veterinarian prior to sale day. This examination includes palpation of the sexual anatomy.

BVD-All bulls in this catalogue have been DNA tested, or blood tested negative for BVD and vaccinated twice (20/03/21 and 22/04/21). All bulls have also been given a 7 in 1 vaccination (15/03/21), prior to sale which will cover you for the next 12 months. They should receive an annual booster thereafter.

All RUAVIEW bulls are Group Breedplan recorded, carcass scanned for Eye muscle, Fat and IMF. They are also 7 in 1 inoculated.

TB STATUS at RUAVIEW is C10. The sale bulls tested clear 15/04/2021

OSH

Every effort will be taken by the vendors, on the day of the sale as well as days of inspection, to ensure the safety of buyers and visitors. However, this farm is run under normal management conditions, therefore potential hazards exist with relation to livestock and the environment. Please take care to ensure your personal safety.

BEEF-CLASS STRUCTURAL ASSESSMENT GUIDE

Beef-Class Structural Assessment Guide

For docility: 1 is ideal (docile), 3 is less ideal (restless) and 5 is aggressive. (Scores of 1 and 2 are preferred).

For traits scored 1-9: 4 and 6 show slight variation from ideal but this includes most animals. Any animal scoring 4 and 6 would be acceptable in any breeding programme.

- 3 and 7 shows greater variation and would be acceptable in most commercial breeding programmes, but seed stock producers should be wary.

- 2 and 8 are low scoring animals and should be looked at closely before purchasing.

- 1 and 9 should not be catalogued and are considered culls.

| Trait | Key | Scoring Range | |
|-------------------------------------------|----------|---------------------------------------------------------------------------------------------|-----------------------------------------------------------------|
| Docility | D | ① 2 3 4 ⑤ | 1. Docile 3. Restless 5. Aggressive |
| Front Feet Claw Set Rear Feet Claw Set | FC RC |  | 1. Open/Divergent 5. Good 9. Scissor Claw |
| Front Feet Angle Rear Feet Angle | FA RA |  | 1. Stubbed Toe 5. Good 9. Shallow Heel |
| Rear Legs Side View | RS |  | 1. Straight 5. Good 9. Sickle Hocked |
| Rear Legs Hind View | RH |  | 1. Bow Legged 5. Good 9. Cow Hocked |
| Front Legs Front View | FF |  | 1. Bow Legged 5. Good 9. Knocked Knee |
| Udder Evenness | UE | 1 2 3 4 5 6 7 8 9 | 1. Dropped Fore Qtr. 5. Good Balance 9. Dropped Rear Qtr. |
| Teat Size and Shape | TZ |  | 1. Very Small/Thin 5. Good 9. Very Large/Bulbous |
| Sheath & Navel Score | SN |  | 1. Pendulous 3. Good 5. Clean/Tight |
| Capacity | CP | ① 2 3 4 ⑤  | 1. Lacking Capacity 3. Medium 5. Large Volume |
| Muscle Score | LM |  | A. Very Heavy C. Medium E. Light |

Beef Class Explained

It has been recognised within the beef industry that there has been a substantial financial loss due to badly structured animals. Whether it is the bull being unable to serve, steers not being able to finish a long term feeding programme or cows with badly structured udders not being able to rear their calves properly, it has been costing producer's income. Ruaview Stud has always used the Beef Class structural assessment system. We believe this is still the most important aspect prior to any purchase, which is then combined with the EBV's to help complete the picture.

Breeding Objectives

Establishing Breeding objectives, that you make on a bull selection, will influence your herd for the next 10-15 years. When selecting a bull to use in your breeding programme, you need to weigh up many factors. Some of these are listed below:

1. Your current herd performance
2. What specific Breeding Traits need to be addressed to increase your returns? What is your biggest problem that costs you the most financially?
3. The environment under which your herd is managed.
4. The market that you intend to aim for, being the weaner market or for finishing the cattle.
5. Are you looking for Maternal or Terminal sires?

Bull selection is frequently based on a gut feeling about the relative value of a range of traits. These traits include Fertility, Ease of calving, Growth, Structure, Carcass, Temperament, and others, but the Breeding Objective should be a balance of all the traits that will add profit to your operation.

Bulls should be fertile and have passed a bull breeding soundness evaluation, carried out by a Veterinarian . The bulls must be structurally sound to be able to increase mating ability, as bad legs and excessive angles will lead to early arthritis and severely restrict serving ability. They should also have good size testicles for semen production and storage.

With the use of EBV's and the increased attention to carcass conformation, along with other information given in sale catalogues, a balanced selection criteria can give your herd a significant lift in profit. This can come through as increasing weaning by 10% and increasing weaning weights 20KG in some instances. By increasing rib and rump fats in your breeding cows they are easier maintained. Decreasing calving problems by 5% can make a significant difference also. All of these areas can make a significant difference to profitability.

The selection decision is based on identifying which bull or bulls, from those available, with all relevant information, will meet the needs of your herd. The biggest bull may not always be the best bull.

By acknowledging where genetic and phenotypic improvements could be made in your herd, a clear direction for future profits can be achieved. You as a beef producer need to remain focused on traits that are heritable and of economic importance to your business.

Remember your Breeding Objectives should always be to improve your bottom line financially.

Understanding EBV's

Accuracy

An accuracy is presented with every EBV and is indication of the amount of information that has been used in the calculation of that EBV. The higher the accuracy the lower the likelihood of change in the animal's EBV's as more information is analysed for that animal or it's relatives. Accuracy below 75% should be considered low, however young bulls with performance data but no progeny will all have similarly low accuracies.

Birth Weight EBV (kg) is based on the measured birth weight of progeny, adjusted for dam age. The lower the value, the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

200-Day Growth EBV (kg) is calculated from the weight of progeny taken between 80 and 300 days of age. Values are adjusted to 200 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400-Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600-Day Weight EBV (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

Mature Cow Weight EBV (kg) is based on the cow weight when the calf is weighed for weaning, adjusted to 5 years of age. This EBV is an estimate of the genetic difference in cow weight at 5 years of age and is an indicator of growth at later ages and potential feed maintenance requirements of the females in the breeding herd. Steer breeders wishing to grow animals out to a larger weight may also use the Mature Cow Weight EBV.

Milk EBV (kg) is an estimate of an animal's milking ability. For sires, this EBV indicates the effect of the daughter's milking ability, inherited from the sire, on the 200-day weights of her calves. For dams, it indicates her milking ability.

Scrotal Size EBV (cm) is calculated from the circumference of the scrotum taken between 300 and 700 days of age and adjusted to 400 days of age. This EBV is an estimate of an animal's genetic merit for scrotal size. Scrotal size is an indicator of male fertility as expressed in semen quality and quantity. Higher(positive) EBV indicates higher fertility. SS is also positively associated with female fertility.

Carcase Weight EBV (kg) is based on abattoir carcass records and is an indicator of the genetic differences in carcass weight at the standard age of 750 days for Angus and 650 Days for Simmental.

Eye Muscle Area EBV (sq cm) is calculated from measurements from live animal ultrasound scans and from abattoir carcass data, adjusted to a standard 400 kg carcass for Angus and 300kg carcass for Simmental. This EBV estimates genetic differences in eye muscle area at the 12/13th rib site of a 400kg dressed Angus carcass and a 300kg dressed Simmental Carcass. More positive EBVs indicate better muscling on animals. Sires with relatively higher EMA EBVs are expected to produce better-muscled and higher percentage yielding progeny at the same carcass weight than will sires with lower EMA EBVs.

Rib Fat and Rump Fat EBVs (mm) are calculated from measurements of subcutaneous fat depth at the 12/13-rib site and the P8 rump site (from live animal ultrasound scans and from abattoir carcass) and are adjusted to a standard 400 kg carcass for Angus and a standard 300kg carcass for Simmental. These EBVs are indicators of the genetic differences in fat distribution on a standard 400 kg carcass for Angus and a standard 300kg carcass for Simmental. Sires with low, or negative, fat EBVs are expected to produce leaner progeny at any particular carcass weight than will sires with higher EBVs.

Retail Beef Yield EBV (%) indicates genetic differences between animals for retail yield percentage in a standard 400 kg carcass for Angus and a standard 300kg carcass for Simmental. Sires with larger EBVs are expected to produce progeny with higher yielding carcass.

Intramuscular Fat EBV (%) is an estimate of the genetic difference in the percentage of intramuscular fat at the 12/13th rib site in a 400 kg carcass for Angus and a 300kg carcass for Simmental. Depending on market targets, larger more positive values are generally more favourable.

Angus: Self-Replacing Index (\$)- Estimates genetic differences between animals in net profitability per cow joined for a self-replacing commercial herd, targeting the production of grass finished steers. Steers are assumed marketed at 525 kg live weight (280 kg carcass weight and 10 mm fat depth) at 16 months of age.

AngusPure Index(\$) – Estimates genetic differences between animals in net profitability per cow joined for a self-replacing commercial Angus herd, targeting the production of grass finished steers for the AngusPure programme. Steers are assumed marketed at 525 kg live weight (280 kg carcass weight and 10 mm fat depth) at 18 months of age with a significant premium paid for marbling.

Note that \$Index values for individual animals are sensitive to the assumptions used in the BreedObject analysis to calculate the selection index. More information is available on the weightings used in the New Zealand Angus Selection Indices.

Accuracy

Accuracy (%) is based on the amount of performance information available on the animal and its close relatives - particularly the number of progeny analysed. Accuracy is also based on the heritability of the trait and the genetic correlations with other recorded traits. Hence accuracy indicates the "confidence level" of the EBV. The higher the accuracy value the lower

the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives. Even though an EBV with a low accuracy may change in the future, it is still the best estimate of an animal's genetic merit for that trait. As more information becomes available, an EBV is just as likely to increase in value, as it is to decrease.

Accuracy values range from 0-99%. The following guide is given for interpreting accuracy:

| Accuracy range | Interpretation |
|----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| less than 50% | EBV should be considered as a preliminary estimate. It could change substantially as more performance information becomes available. |
| 50-74% | Medium accuracy, usually based on the animal's own records and pedigree. Still subject to substantial changes with more information, particularly when the performance of progeny are analysed. |
| 75-90% | Medium - high accuracy and includes some progeny information. Becoming a more reliable indicator of the animal's value as a parent. |
| more than 90% | High accuracy estimate of the animal's true breeding value. It is unlikely that the EBV will change much with the addition of more progeny data. |

As a rule, animals should be compared on EBVs regardless of accuracy. However, where two animals have similar EBVs the one with higher accuracy could be the safer choice, assuming other factors are equal.

Genetic test status

AMFU: The animal is expected to be free of the mutation responsible for Arthrogyposis Multiplex (AM) but has not been tested.

NHFU: The animal is expected to be free of the mutation responsible for Neuropathic Hydrocephalus (NH) but has not been tested.

CAFU: The animal is expected to be free of the mutation responsible for Contractural Arachnodactyly (CA) but has not been tested.

DDFU: The animal is expected to be free of the mutation responsible for Development Duplication (DD) but has not been tested.

ANGUSPURE PARTNER

AngusPure has teamed up with those who share in our vision - to focus on the end consumer. We want to create an 'AngusPure Moment'.

A moment in time when anyone, anywhere in the world, is able to share in a moment of synergy. A moment created by the finest grass-fed beef eating experience.

We have partnered with 89 of New Zealand's finest Angus studs and this stud is one of them. They are developing the best genetics and implementing the best management practices.

A

ANGUSPURE ENDORSED BULLS

This index gives commercial farmers confidence that by using this selection tool, bulls are most likely to leave progeny with superior carcase quality and at the same time achieve desirable outcomes for self replacing herds, as the AngusPure index still rewards cattle with strong maternal attributes like calving ease, scrotal and growth, along with carcase weight. To qualify for the 'A' endorsement, bulls must meet a minimum AngusPure index of +\$120.

These bulls will be => +\$120 for AngusPure index.

A+

EXTRA ANGUSPURE ENDORSEMENT FOR MARBLING

In addition to the 'A', and to assist bull buyers who wish to select for more marbling we are rewarding those animals that are in the top 25% of the breed for AngusPure index and who also have their marbling EBV (IMF) in the top 50% as well. These bulls will be awarded an 'A+' endorsement. Marbling is one of the very highest eating quality attributes and is necessary in order to meet some of the highest premium requirements for our new program, AngusPure Special Reserve. To qualify for the 'A+' endorsement, bulls must meet a minimum AngusPure index of +\$141. They must also meet the minimum marbling requirement of +1.7 for IMF

These bulls will be => +\$141 for AngusPure index and => + 1.7 for IMF EBV.

AngusPure recognises the need to lift the amount of marbling in our New Zealand cow genetics, in order to fill the requirements of consumers going forward. Marbling has two critical components; genetics and feeding. Feeding on a rising plane of nutrition is vital but without the genetics these attributes will not be able to express themselves.

PGG Wrightson Livestock

Breeding Better Business

As part of New Zealand's largest Livestock network, our team of Genetics Specialists have more contacts, more reach and more market influence.

As a result, they see more breeding programmes around the country and are exposed to more ideas, gaining more insights into current trends and future innovations.

For the farmers we partner with, that means more advice, more knowledge, and more opportunities.

It also means more of a marketplace for sellers, more choice for buyers, and more value for the rural community in general.

If you're looking for a planned approach to success, give us a call today.

Helping grow the country

REFERENCE SIRES

KAROO KNOCKOUT K176(AI) (IMP AUS)

Knockout is producing progeny with superior capacity & muscling, combined with very good structural soundness, and amazing docility. He also has a shorter gestation length and a lot of body fats.

March 2021 Angus BREEDPLAN

| | Calving Ease DIR (%) | Calving Ease DTRS (%) | Gestation Length (days) | Birth Wt. (kg) | 200 Day Wt (kg) | 400 Day Wt (kg) | 600 Day Wt (kg) | Mat Cow Wt (kg) | Milk (kg) |

Ruaview Pinetree AC6

Ruaview Pinetree was used in our herd as a yearling, and we also collected semen from him for our own use. He then went on to be Supreme Simmental Champion at Beef Expo in 2016. His progeny have retained the style and docility of his Sire: Glen Anthony Y-Arta AY02, but he has added massive growth. He is already a trait leader for growth. Pinetree's Dam is of very high quality and has produced 4 sons for sale already. An incredible breeding cow.

WE'VE MADE BULLS MORE ATTRACTIVE.

14 days
FREE
cover

6.5%
for 12
months

The handsome beasts in this catalogue will look even more appealing on sale day, thanks to FMG – the country's leading rural insurer. With 14 days free Premier Bull Cover, they'll be automatically insured from the fall of the hammer, including their transit to the farm. And you can keep that cover going for the remaining 12 months for just 6.5% of the purchase price, for bulls up to the value of \$25,000. So don't miss this chance to buy bulls covered by FMG. It's a mighty attractive offer.

Please note this is only a summary of FMG products and services and is subject to our specific product documentation. For full details, refer to the relevant policy wordings at fmg.co.nz

We're here for the good of the country.

FMG
Advice & Insurance

Premier Bull Cover

What is Premier Bull cover?

FMG has partnered with Angus NZ to offer comprehensive insurance cover from the fall of the hammer with this vendor. All bulls auctioned at this exclusive Angus NZ and FMG sale up to the value of \$25,000 will automatically be covered under FMG's Premier Bull cover for 14 days at no cost to the purchaser.

Length of cover

To extend cover for the specified bull beyond 14 days you need to tick Premier Bull cover 12 months on the Purchaser Instruction and Insurance Slip in this catalogue. The specified bull is then covered for the remaining period of 12 months. The premium is payable to FMG and is in addition to the purchase price of the bull.

If you require an alternative cover period talk to an FMG representative.

Your bull's value

Any bull covered under this policy must be purchased for \$25,000 or less.

For any bull purchased over \$25,000 talk to an FMG representative.

During the period of insurance, the specified animal is covered for:

- Death or infertility as a result of accident, disease or illness.
- Transit.
- Theft.

What we will pay

Fair market value of your specified bull, less any amount you receive for the sale of the carcass, up to the amount shown on the insurance certificate.

Disclaimer

Please note this is only a summary of the product and is subject to our specific product documentation. For full details, you should refer to the policy document. You can get these documents, and any other information you need, from your FMG representative, by calling us or visiting our website.

Purchaser Instruction and Insurance Slip

This slip MUST be completed and handed to the Booking Clerk before leaving the sale.

On behalf of the vendor, PGW will pay a purchasing rebate of 5% of the purchase price excluding GST, plus GST, to livestock agents with a PGW Monthly Account that are also Accredited Agencies on bidr® where the buyer has registered on bidr® under that Accredited Agency.

CARING FOR YOUR NEW BULL.

Buying a bull, is an investment, to help improve the quality and profitability of your herd for many years to come.

To get the most from your new bull it pays to look after him well. When he arrives home, have a few quiet steers or cows for him to run with. The bulls have just been taken out of their group. Even normally quiet bulls can get agitated and may take a while to adjust. Talk to them quietly, handle them quietly, no dogs, give them room to move as everything is new. Make sure he has a water trough available as RUAVIEW bulls have had only trough water-NOT dam water. Feed a bit of hay for a few days for the bull to get accustomed to you, your bike, and your dogs.

It is very advisable to continue with annual inoculation of the bulls initial vaccination programme. This refers to 7 n 1, and BVD.

Feed your bull well. A worm drench 8 weeks prior to mating and immediately after mating can be very beneficial.

RUAVIEW bulls are used to being handled by motorbikes. All our fences are electric.

NZ's VIRTUAL SALEYARD | www.bidr.co.nz | 0800 TO BIDR

NOTES

This sale will be hosted by bidr® (www.bidr.co.nz) as a HYBRID auction, with online bidding and a live-stream available on sale day, as well as the normal on-farm format. All intending ONLINE purchasers must register on bidr® in advance of the sale date, by visiting the website and using the “sign up” button, adding their contact information and nominating the agency they would like to purchase through and account held with that agency. Alternatively, purchasers can organise an agent from one of the agencies listed on bidr® to buy on their behalf. The bidr® team is always available to help purchasers get signed up and registered, and the HelpDesk is proudly managed in-house from the Waikato. Please call 0800 TO BIDR (0800 86 2437), or email enquiries@bidr.co.nz for assistance at any point. Alternatively, contact Caitlin Rokela, National Territory Manager, for any enquiries on 0274056156.

John and Helen thank you for your attendance either on line or in person, and in your trust and belief of our Breeding Programme.

To all our buyers and under bidders we would like to thank you so much.
